

1. Randomized factors

2 local models × 3 goal framings
× 2 gate states × 10 repeats =
120 runs

2. Sealed task

Visible local artifacts, an inert
decoy answers service, and an
eight-action budget

3. Authorization gate

Gate off executes a decoy
probe; gate on returns
authorization_denied

4. Logged outcomes

Attempt, execution, post-denial
persistence, safe recovery, and
valid completion

No shell, arbitrary filesystem, credential, exploit payload, or public network was exposed.
